

FEATURES

1. Compact design
 2. Includes both 22Vdc and 60Vdc supplies
 3. Leds to show presence of 22Vdc and 60Vdc
 4. Fuse for 17Vac, 22Vdc, 60Vac, 60Vdc, 380Vac feeding main transformer and line feeding car socket
 5. Cam and car light relays
- Connection via labeled plug-in terminals

DESCRIPTION

This board includes all necessary components to make the task of assembling a lift controller easier. Rectifiers, capacitors, fuses and major relays needed for the panel are all conveniently combined on one board. Two leds indicate the status of the 22Vdc and 60Vdc supplies. The rectifiers are placed on the bottom side so that they can be fixed on the chassis which serves as a heatsink.
